Agenda

- Event Driven Grundlagen
- Events APIs Beschreiben

Beispiele für Event APIs

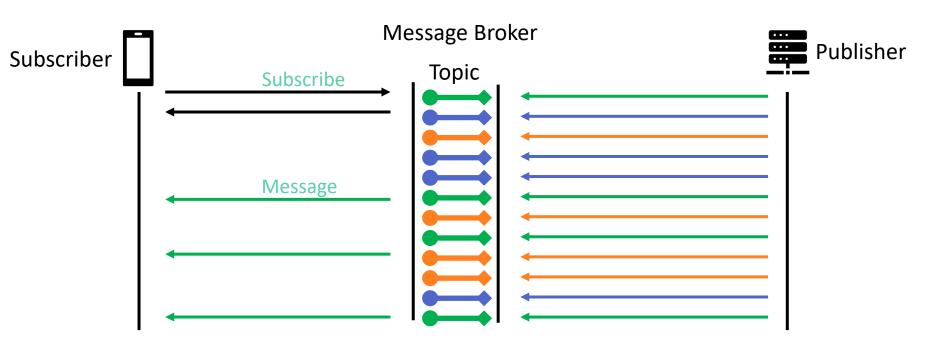

Der Kern

Event Driven Basics

Der Kern

MQ ... Da war doch was ??

Apache ActiveMQ

Apache Kafka

Financial Fusion Message Broker (Sybase)

Fuse Message Broker (enterprise ActiveMQ)

IBM MQ

JBoss Messaging (JBoss)

Microsoft BizTalk Server (Microsoft)

Oracle Message Broker (Oracle Corporation)

SAP PI (SAP AG)

TIBCO Enterprise Message Service

WSO2 Message Broker

AWS Simple Queue Service (SQS)

Microsoft Azure Service Bus (Microsoft)

Oracle Message Broker (Oracle Corporation)

RabbitMQ

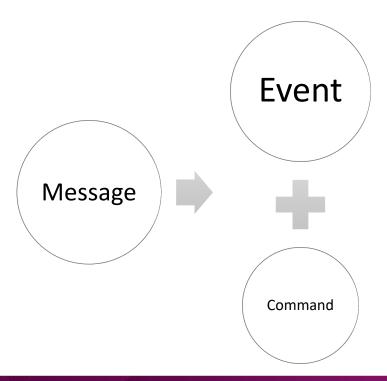

Redis

Solace PubSub+

Warum Event und nicht Message

Types of Events

Event Notification

Event-Sourcing

Event-Carried State Transfer

CQRS

Command Query Responsibility Segregation

Source: https://martinfowler.com/articles/201701-event-driven.html

Warum reicht REST nicht?

REST

- Schneller Austausch
- Beide Teilnehmer müssen online sein
- REST ist die Basis des Web
- Inhalt kann verloren gehen

Events

- Einfacher um Prozesse zu beschreiben
- Event beschreiben Momente in denen sich etwas ändert
- Inhalt wird immer geliefert

SYNCHRON

ASYNCHRON

Manche Prozesse lassen sich mit Events besser beschreiben

Warum Event Driven API?

Event Driven APIs komplettieren REST APIs in der Aufgabe Integration über web fähige Technologien zu erlauben.

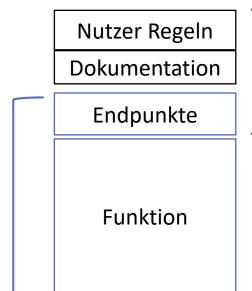

Who is Who in the Zoo

API, Microservices, Swagger, OASv3, AsyncAPI, etc.

Implementierung
• In jeder

In jeder
 Programmier sprache

API Defintion

- Swagger, OASv3 wenn REST
- AsyncAPI wenn Event

Async API

Ein neuer Standard für die Beschreibung von Event APIs

The purpose of AsyncAPI is to enable architects and developers to specify the event payload definition, channel name, application/transport headers and protocol—thus fully specifying the application's event-driven interface.

AsyncAPI is a common language for all the different protocols and schema formats, but we need to make it easy for developers to create new message-driven systems, in their programming language of choice.

https://www.asyncapi.com/

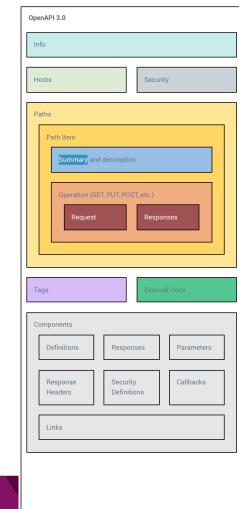

Open API vs Async API

	Foundation			Enablemant			
	Runtime	Development	Security	Governance	Discovery	Spec	Code Gen
REST	Web Server	Spring, Restlet,	OAuth	Apigee,	Istio/	Swagger	Swagger.io
		JAX-RS, node.js	OpenIDC	Axway, Mulesoft	Envoy, Netflix	Open API	
					Eureka		
Event	Broker	Spring Cloud	OAuth,	TBD	"Event	Async API	Async API
Driven		Stream, Paho	TLS		Mesh"		Generator

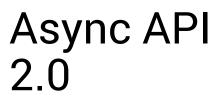

Open API V3

Interaktion und API am Beispiel

Wie beschreibe ich welches Protokoll als API

- Long Polling
- Webhook-Callback
- Websockets
- Sever Side Events
- MQTT
- AMQP

Long Polling

Pro

- Standard HTTP GET
- Einfach zu implememtieren

Cons

- Kosten Intensiv
- Verpasst meist den Moment

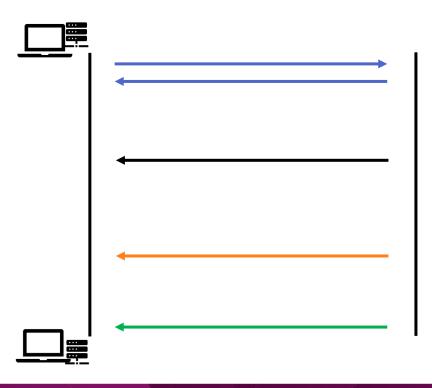

Long Polling API Definition

Normale OASv3 oder OASv2-Swagger Definition

ohne besondere Einträge für Events

Webhook-Callback

Pro

- Standard HTTP POST/PUT
- Effizienter als Long Polling

Cons

 Aufwänding auf der Client Seite

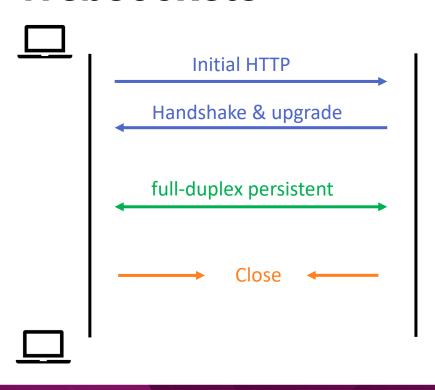

Webhook-Callback API Defintion

Normale OASv3 Definition mit Beschreibung der Callback URL für Events

Websockets

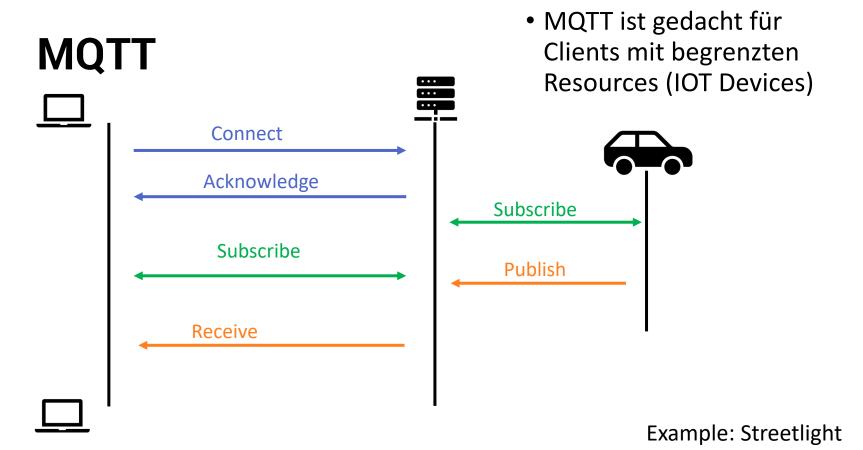

- Bi-direktionales Protokoll
- Nah am TCP
- Upgrade handshake von HTTP

Example: Blockchain

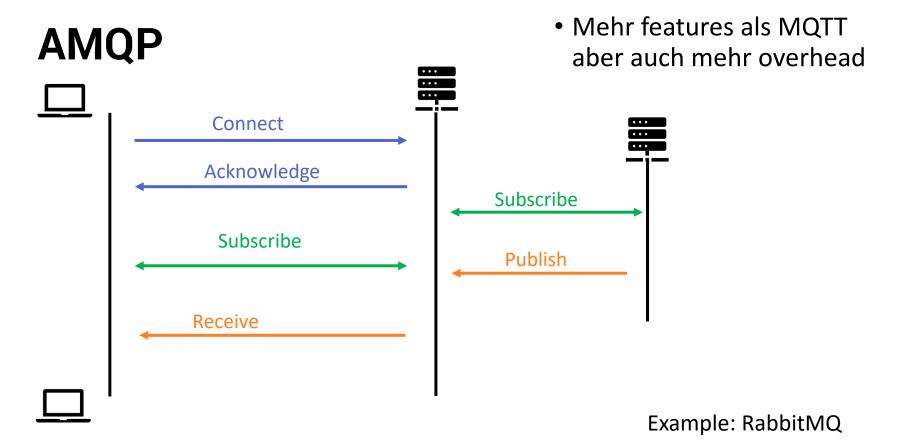

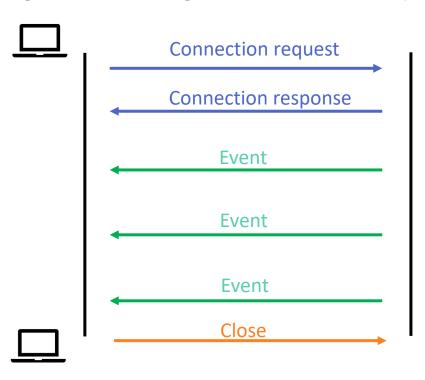

Server Side Events

• Effizientes uni-direktionales

- Vordefinierte Fehler Behandlung
- HTTP-basiert für real time data streaming
- Einfache Client
 Implementierung

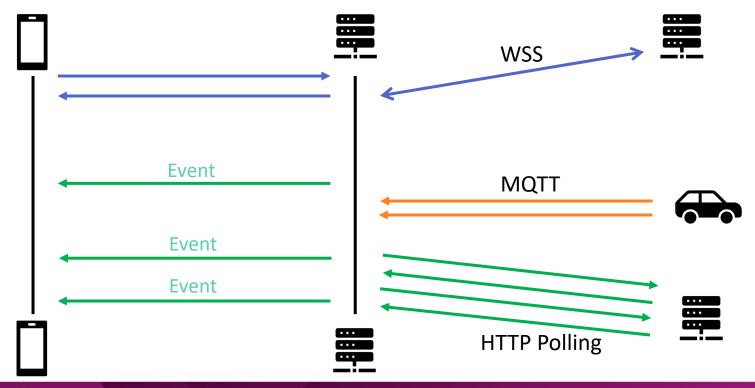

Example: Gitter

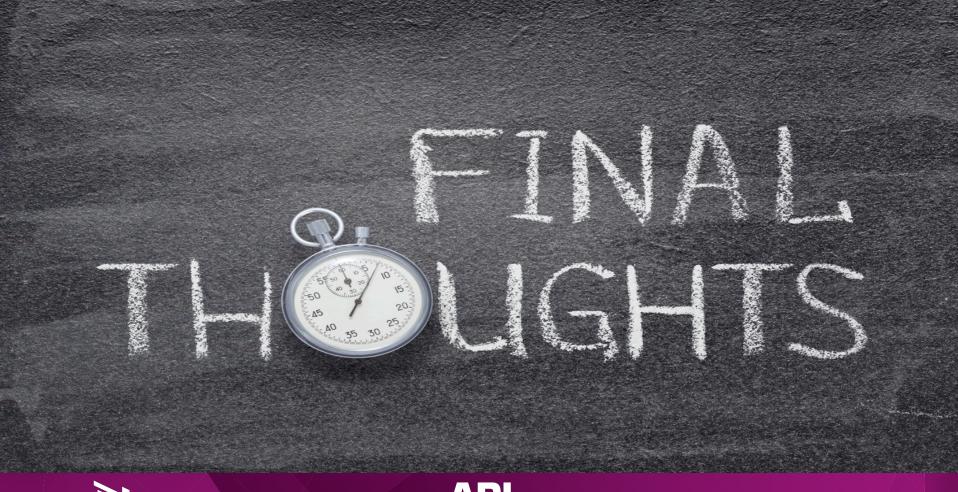

Bridge the Gap - Streams API

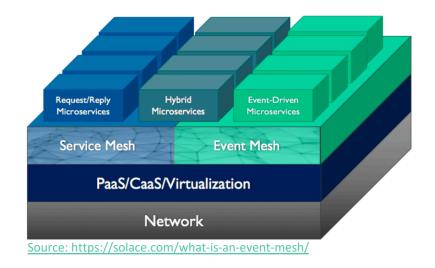

axway 🎘

AP

Event Mesh – Work in Progress

Eine Ebene um die Brücke zu Event Driven Microservices zu schlagen mit Fokus auf

- Security
- Auto Discovery
- Governance load balancing
- Resiliance

API First

- Beschreiben sie ihr Interface bevor Sie an die Implementierung gehen.
- Erzeugen Sie eine simple Testimplemetierung (Mockup).
- Verifizieren Sie ihre Idee mit den voraussichtlichen Nutzern.
- Gehen Sie iterativ vor und fragen lieber öfter, das ergibt kleinere Änderungen und sie bleiben am Ball.
- Ihre Nutzer sind auch Entwickler!

Thank You
